## WHAT IS CLAIMED IS:

- 1. A jig assembly for use with a work piece and a hand-held power
- tool including a cutting bit, the jig assembly comprising:
- a first member having a first opening and configured to be
- 4 positioned adjacent a first side of the work piece; and
- at least one insert configured to fit within the first opening in
- 6 the first member and including a second opening;
- wherein at least one of the first opening and second opening is
- 8 configured to allow a portion of the hand-held power tool to pass
- 9 therethrough to contact the work piece and to act as a guide for the hand-
- held power tool as it removes material from the work piece.
- 1 2. The jig assembly of Claim 1, further comprising a second
  - member located adjacent a second side of the work piece.
- 1 3. The jig assembly of Claim 2, wherein the first member and the
- second member are coupled together so that the work piece is positioned
- 3 intermediate the first and second members.
- 1 4. The jig assembly of Claim 3, wherein the first member and the
- second member are coupled together with fasteners.
- The jig assembly of Claim 4, wherein the fasteners are bolts and
- 2 nuts.

2

- 1 6. The jig assembly of Claim 5, wherein the first member includes 2 apertures configured to receive the bolts.
- 7. The jig assembly of Claim 1, wherein the first member is substantially transparent.
- 1 8. The jig assembly of Claim 7, wherein the first member is formed 2 from polycarbonate.
- 1 9. The jig assembly of Claim 1, wherein the first member includes 2 alignment lines.
- 1 10. The jig assembly of Claim 2, further comprising a pad coupled 2 to at least one of the first and second members and configured to contact 3 the work piece.
- 1 11. The jig assembly of Claim 10, wherein the pad is a rubber material.
- 1 12. The jig assembly of Claim 11, wherein the rubber material is neoprene.
- 1 13. The jig assembly of Claim 1, wherein the size of the first
  2 opening is sufficient to allow the hand-held power tool to create a 5 X 7 inch
  3 recess in the work piece.

;

- 1 14. The jig assembly of Claim 1, wherein the first member includes
  2 mounting apertures configured to receive fasteners for coupling the first
- 3 member to the work piece.
- 1 15. The jig assembly of Claim 1, wherein the at least one insert is transparent.
- 1 16. The jig assembly of Claim 15, wherein the at least one insert is 2 formed from polycarbonate.
- 1 17. The jig assembly of Claim 1, wherein the at least one insert includes a shoulder extending outwardly from an outer edge of the at least one insert.
- 18. The jig assembly of Claim 17, wherein the first member includes 2 a recess proximate the first opening configured to receive the shoulder of the 3 at least one insert.
- 1 19. The jig assembly of Claim 1, wherein the at least one insert
  2 includes mounting apertures configured to receive fasteners for coupling the
  3 at least one insert to the work piece.
- 20. The jig assembly of Claim 19, wherein at least one of the mounting apertures of the at least one insert includes a counterbore.
- 21. The jig assembly of Claim 1, wherein the at least one insert includes alignment lines.

•

- 22. The jig assembly of Claim 1, wherein a first of the at least one insert includes an opening having a first shape and a second of the at least one insert includes an opening having a second shape.
- 23. The jig assembly of Claim 1, wherein the shape of the opening of the at least one insert is one of square, rectangular, circular, oval, triangular, heart-shaped, star-shaped, moon-shaped, flag-shaped, arrow-shaped, letter-shaped, number-shaped, or symbol-shaped.
- 1 24. The jig assembly of Claim 1, wherein the at least one insert 2 includes a third opening.
- 25. The jig assembly of Claim 1, further comprising a sub-base configured to couple to and support the hand-held power tool as the tool is maneuvered across the first member.
  - 26. The jig assembly of Claim 25, wherein the sub-base is substantially planar and comprises a first leg and a second leg arranged substantially perpendicular to and co-planar with one another.
- 27. The jig assembly of Claim 26, wherein the sub-base further comprises a circular base proximate the intersection of the first leg and the second leg and substantially co-planar with the first and second legs.
- 1 28. The jig assembly of Claim 27, wherein the sub-base includes an 2 opening located near the center of the circular base configured to allow at 3 least a portion of the hand-held power tool to pass therethrough.

1

2

- 29. The jig assembly of Claim 28, wherein the sub-base further comprises mounting tabs configured to couple the sub-base to the hand-held power tool.
- 30. The jig assembly of Claim 1, further comprising a retainer ring configured to be coupled to the work piece.
- 31. A jig kit for use with a work piece and a hand-held power tool including a cutting bit, the jig kit comprising:
- a top member having a first opening and configured to be positioned adjacent a first side of the work piece;
- a plurality of inserts, each insert being configured to fit within
  the first opening of the top member and including a second opening; and
  a bottom member adapted to be coupled to the top member and
- configured to be positioned adjacent a second side of the work piece;
- wherein at least one of the first opening and second openings is
  configured to allow a portion of the hand-held power tool to pass
  therethrough to contact the work piece and to act as a guide for the handheld power tool as it removes material from the work piece.
- The jig kit of Claim 31, wherein the top member and the bottom member are coupled together with fasteners.
- 1 33. The jig kit of Claim 32, wherein the fasteners are bolts and 2 nuts.

- 34. The jig kit of Claim 31, wherein a first of the plurality of inserts includes an opening having a first shape and a second of the plurality of inserts includes an opening having a second shape.
- 1 35. The jig kit of Claim 31, wherein at least one of the plurality of 2 inserts includes alignment lines.
- 1 36. The jig kit of Claim 31, wherein at least one of the top member, 2 the bottom member, and the plurality of inserts is substantially transparent.
- 1 37. The jig kit of Claim 31, wherein each of the plurality of inserts 2 includes a shoulder extending outwardly from an outer edge of the insert.
- 1 38. The jig kit of Claim 37, wherein the top member includes a 2 recess proximate the first opening configured to receive the shoulder of the 3 insert.
- 39. The jig kit of Claim 31, wherein the shape of the opening of at least one of the plurality of inserts is one of square, rectangular, circular, oval, triangular, heart-shaped, star-shaped, moon-shaped, flag-shaped, arrow-shaped, letter-shaped, number-shaped, or symbol-shaped.
- 1 40. The jig kit of Claim 31, wherein at least one of the plurality of inserts includes a third opening.
- 41. A system for removing material from a work piece, the system comprising:
- a hand-held power tool;

a cutting bit operatively coupled to the hand-held power tool; 4 and 5 a jig assembly including: 6 a first member having a first opening and configured to 7 be positioned adjacent a first side of the work piece; and 8 at least one insert configured to fit within the first 9 opening of the first member and including a second opening 10 configured to allow at least one of the cutting bit and a portion of the 11 hand-held power tool to pass through the second opening and to act 12 as a guide for the hand-held power tool; 13 wherein the cutting bit is configured to remove material from 14 the work piece when the cutting bit is rotated by the hand-held power tool 15 and the cutting bit engages the work piece. 16

- 1 42. The system of Claim 41, further comprising a plunge router 2 coupled to the hand-held power tool and configured to maintain at least one 3 of the power tool and the cutting bit in a spaced relationship with the work 4 piece.
- 1 43. The system of Claim 42, further comprising a sub-base coupled 2 to the plunge router and configured to support the hand-held power tool as 3 the tool is maneuvered across at least one of the first member and the at 4 least one insert.
- 1 44. The system of Claim 41, wherein the cutting bit includes an
  2 elongated shaft having a longitudinal axis extending between a proximal end
  3 configured to be coupled to the hand-held power tool and a distal end
  4 opposite the proximal end.

- 1 45. The system of Claim 44, wherein the cutting bit includes a 2 bearing coupled to the shaft intermediate the proximal end and the distal 3 end.
- 1 46. The system of Claim 45, wherein the cutting bit includes a cutting portion coupled to the distal end of the shaft, the cutting portion including:
- a first flute having a first cutting edge extending a first radial distance from the longitudinal axis of the shaft; and
- a second flute having a second cutting edge extending a second radial distance from the longitudinal axis of the shaft, the second distance being less than the first distance.
- 1 47. The system of Claim 46, wherein the bearing of the cutting bit is configured to contact the edge of one of the first opening and the second opening to restrain the cutting bit from removing material from the work piece beyond the edge of the one of the first opening and the second opening and to restrain the cutting bit from removing material from at least one of the first member and the at least one insert.
